HUU MINH QUANG PHAM

FULL-STACK ENGINEER

0582783592 | quangpham151104@gmail.com | linkedin.com/in/quangpham15 | github.com/QuangPham15 | Minh Khai, Ha Noi

SUMMARY

Full-Stack Engineer with a Bachelor of Information Technology (Software Engineering) from La Trobe University. Currently interning at FPT Corporation, building a real-time project management system with React 18, TypeScript, Node.js, PostgreSQL, and Socket.IO. Experienced in E2E testing with Playwright, CI/CD deployment via Vercel and Render, and JWT/OAuth 2.0 authentication. Seeking a Junior Full-Stack role where I can tackle real product challenges, pick up new technologies fast, and grow within a product-driven engineering team. Proficient in leveraging AI tools (Claude Code, Codex, Gemini) as a core part of the daily development workflow.

KEY SKILLS

Frontend: React 18, Next.js, TypeScript, JavaScript, Zustand, Socket.IO, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, RESTful API, MVC Pattern, JWT Authentication, OAuth 2.0, WebSocket

Database: PostgreSQL (Neon), SQL, Prisma ORM, Sequelize ORM, Database schema design

DevOps & Cloud: Docker, AWS Lambda, CI/CD, Vercel, Render, Serverless deployment, Git, GitHub

Testing: Playwright (E2E Testing)

Methodologies: Agile, Scrum, Git workflow, Code review

Tools & AI: GitHub Copilot, Claude, Codex, Cursor, Figma, Prompt Engineering

WORK EXPERIENCE

FPT CORPORATION

Software Engineering Intern | 03/2026 – Present

quangpham15.github.io/portfolio

- Architected and delivered a full-stack Clone Monday.com application, covering the full development lifecycle — from system design and API architecture to cloud deployment on Vercel and Render.
- Built a real-time collaborative interface with React 18, TypeScript, Zustand, and Socket.IO, enabling live board sync across 5–10 concurrent users with sub-second update latency.
- Designed and implemented 20+ RESTful API endpoints with Node.js, Express, and PostgreSQL (Neon) using MVC pattern and service layer; modeled a relational schema with Prisma ORM across 5+ tables with migration and query optimization.
- Established a Playwright E2E test suite covering 3 critical user flow categories — authentication, board operations, and real-time collaboration — to catch regressions before each deployment.
- Configured CI/CD pipelines via Vercel (frontend, ~1 min deploy) and Render (backend, ~2–3 min deploy) with auto-triggers on Git push, enabling rapid iteration without manual intervention.
- **Personally subscribed to Claude Pro and Codex Plus, integrating an AI stack (Claude Code, Codex, Google Gemini) into the daily workflow — using AI for brainstorming, feature planning, boilerplate generation, and debugging complex issues across the stack.**
- Applied prompt engineering to break down complex requirements into precise AI prompts; leveraged AI to review own code before committing, accelerate learning on new technologies, and generate API documentation to keep the codebase maintainable.

EDUCATION

LA TROBE UNIVERSITY (Sydney Campus)

02/2023 – 11/2025 | Major: Software Engineering

- Diploma of Information Technology — 2023
- High Achiever Scholarship — Top 20% (2023, 2024)
- Bachelor of Information Technology (Software Engineering) — 2025

ACADEMIC EXPERIENCE

OLIVE BRANCH PROJECT (CAP Subject)

08/2025 – 11/2025

- Built a client-facing web app with React, Firestore, and Firebase Auth to manage records and loan tracking for a non-profit organization.
- Designed UI/UX prototypes in Figma and led frontend implementation, delivering interactive features validated through client presentation demos.
- Served as Scrum Master for one of five sprints, facilitating sprint planning, review, and retrospectives to keep team aligned and on schedule.

WEB APPLICATION DEVELOPMENT (CWA Subject)

09/2025 – 10/2025

- Built a Next.js application with 5 dynamic routes, generating runnable HTML5 + JavaScript output via CRUD RESTful APIs backed by Prisma, Sequelize ORM, and PostgreSQL.
- Implemented interactive modules (Escape Room / Court Room) featuring multi-stage logic, timers, and event-driven workflows.
- Containerized with Docker and deployed serverlessly on AWS Lambda, handling dynamic page generation at scale.
